

GENERAL ASSEMBLY OF NORTH CAROLINA

Session 2007

Legislative Actuarial Note

RETIREMENT

BILL NUMBER: House Bill 1433 (First Edition)
SHORT TITLE: Fire and Rescue Workers' Retirement.
SPONSOR(S): Representatives Brubaker, Howard, Ross, and Williams

FUNDS AFFECTED: Local Funds

SYSTEM OR PROGRAM AFFECTED: Local Governmental Employees' Retirement System

EFFECTIVE DATE: July 1, 2007

BILL SUMMARY: Presently firemen and rescue workers are eligible to retire at any age with 30 years of service, age 60 with 25 years of service or age 65 with 5 years of service. This bill changes the eligibility for retirement for firemen and rescue workers to any age with 30 years or age 55 with 5 years of service. This will extend to full-time local firefighters and rescue squad workers the same retirement eligibility requirement as provided to law enforcement officers.

ESTIMATED IMPACT ON LOCAL GOVERNMENTS:

Retirement System Actuary: Buck Consultants estimates the normal cost to increase by 0.85% of payroll from 4.80% to 5.65% of payroll for all firefighters and rescue squad workers in the Local Governmental Employees' Retirement System. They estimate the accrued liability will increase by about \$40,000,000 and an accrued liability contribution of 0.74% based on 24-year liquidation will be required. The annual cost, based on an estimated payroll of \$328 million is as follows:

Table with 6 columns (years 2007-08 to 2011-2012) and 3 rows (Normal Cost, Accrued Liability, Retirement Cost) showing financial projections.

General Assembly Actuary: Hartman & Associates estimates the normal cost to increase by 0.87% of payroll from 4.80% to 5.67% and the accrued liability contribution to increase by 0.65% of payroll for a total increase of 1.52% of payroll for all firefighters and rescue squad workers in the Local Governmental Employees' Retirement System. Hartman & Associates estimated a salary base of \$355 million but the following amounts are based on the same salary base as Buck used.

Table with 6 columns (years 2007-08 to 2011-2012) and 3 rows (Normal Cost, Accrued Liability, Retirement Cost) showing financial projections.

ASSUMPTIONS AND METHODOLOGY: Local Governmental Employees' Retirement System

The cost estimates of the System's Actuary are based on the employee data, actuarial assumptions and actuarial methods used to prepare the December 31, 2005 actuarial valuation of the fund. The data included 123,015 active members with an annual payroll of \$4.2 billion, 38,448 retired members in receipt of annual pensions totaling \$575 million and actuarial value of assets equal to \$14.4 billion. Significant actuarial assumptions used include (a) an investment return rate of 7.25%, (b) salary increase rate of 6.25%, (c) the 1979 George B. Buck Mortality Tables for deaths in service and after retirement and (d) rates of separation from active service based on System experience. The actuarial cost method used was the projected benefit method with aggregate level normal cost and frozen accrued liability. Detailed information concerning these assumptions and methods is shown in the actuary's report, which is available upon request from Stanley Moore.
